Aim of the Module

The aim of this module is to consolidate and advance undergraduate and practice experience to develop and practically apply knowledge in equine dermatology.

Learning Outcomes

At the end of the module, candidates should be able to:

1. apply clinical reasoning skills and evidence-based medicine to evaluate equine dermatological disorders including recognition of the significance of history and clinical signs, formulation of a differential diagnosis list and application of appropriate testing in reaching an accurate diagnosis;
2. critically evaluate infectious dermatological conditions to design preventive health care plans;
3. critically appraise the literature relevant to clinical cases in the topics covered and how the literature can be used to inform practice;
4. critically reflect on the appropriate case for onward referral.

Module Structure

The syllabus will be divided into 4 study units, each containing lecture and reading material supported by weekly interactions in the form of asynchronous case-based discussions, other discussions and/or synchronous journal clubs/literature critiques.

Study Unit 1: This unit will cover the embryological development, anatomy, physiology, immunology and histology of normal skin and appendages and the response of the skin to insult.

Study Unit 2: This unit will focus on the general approach and diagnosis to the equine dermatology case.

Study Unit 3: This will focus on the clinical presentation of equine dermatological disorders

Study Unit 4: This unit will cover the range of therapeutic options in equine dermatology and their application to specific disease states.

Assessment Strategy

- **2 x 1500-word reflective case reports (60%)**
On a topic related to the relevant study units, students are required to reflect on their own practice, using evidence-based veterinary medicine to inform their reflection. Reflective case reports are written following the format of published case reports in the veterinary literature. The case report component of the assessment must be passed for successful completion of the module, and is non-compensatory with other assessments, however there is compensation between case reports. Case reports are also submitted to a discussion board for critique and discussion by/with peers. A proportion of marks for this assessment are also allocated to this discussion element.
- **1 x 1-hour open book examination (30%)**
Based around clinical scenarios/cases, relevant to the module study units.
- **1 x written journal critique (not more than 500 words) and group discussion (10%)**
Hosted by a staff member online synchronously using MS Teams. 2-4 students critique the same paper, and then discuss their critiques and any variations with the group, and the tutor and the students then hold a discussion of all papers. These are assessed on the submitted critique as well as the discussion.
- **1 x case log – 10 cases (pass/fail)**
The case log assessment is designed to assist the candidate in developing a solid foundation for everyday equine practice and demonstrate the necessary knowledge and skill base in the clinical setting.

Assessments are submitted sequentially with feedback being given between assessments to aid in the development of writing skills.

PLEASE NOTE: It is your responsibility to ensure that you have access to sufficient appropriate cases where you were the primary decision maker to produce adequate material for the module. This may not be possible with some internship positions. You must also be aware of any limitations of your facilities that may make the accumulation of appropriate cases difficult or impossible.
