Liverpool Women in Science & Engineering

‘The Science of Goo!’ Guest lecture with Prof. Dame Athene Donald FRS

Professor Donald will be exploring the soft materials colloquially known as goo and answering some of the key questions;

- why it is that long chain molecules (polymers) can be used to make these materials?
 - why they have the effect they have
- how understanding them can be powerful for creating new medical treatments, help to understand why shampoos don't simply roll off our hair and down the drain and control the way we appreciate food as we eat it.

**Monday 6 March 2017
18.30 to 20.00
Central Teaching Hub,
University of Liverpool**

All welcome. Places are FREE, no booking required. For more details visit [**https://goo.gl/t1ub3l**](https://goo.gl/t1ub3l)
